

Question 2.

The following  $^{18}\text{F}$ -FDG PET images were obtained from three different patients, A to C, all of whom were clinically diagnosed systemic sarcoidosis. Fig. A-1, B-1 and C-1 were the frontal view of 3D MIP and Fig. B-2 and C-2 showed Bull's eye map of myocardial  $^{18}\text{F}$ -FDG uptake. The Bull's eye map of patient A could not be created. Which patient shows the typical cardiac involvement?
